EDUCATION

MIPT DREC, Bachelor of Applied Mathematics & Physics.
Moscow, Russia
GPA: 7.61

PROJECTS

C-like language: In this project I implemented semantic and lexical analysis. Likewise, here was added recursive descent. As a result, I made translator from my own language to simplified assembler, which I wrote earlier. In my language you can use conditional operators, loops, variables, functions. Furthermore, I used graphwiz for debug and compiling a tree.

Mandelbrot Set: In this project I researched SIMD optimizations for construction the Maldenbrot's set. The results of my research you can see on my GitHub.

Alpha-blending: Alpha-blending is the task of superimposing one picture on another. Here I continued researching SFML and SSE instructions. The results of my research you can see on my GitHub.

**COMPUTER
SKILLS**

Languages: C/C++, x86-64 Assembly, LaTeX, Python.
Tools: Make, CMake, VSCode, git, graphwiz, SFML, valgrind, flex.
Foreign language: English(B1).

INTERESTS

compilers, low-level optimization, operation systems, computer architecture, static and dynamic analysis, digital circuit design, FPGA, mathematics.

ACHIEVEMENTS

All-Russian Olympiad for Schoolchildren in Physics — Six-time awardee of regional stage (2017-2022)
All-Russian Olympiad for Schoolchildren in Mathematics — One-time awardee of regional stage (2021)
Mathematics International Zhautykov Olympiad — Participant (2022)
Completed ILab course "C-Programming" in MIPT (2022-2023)
Passed 6 out of 8 tasks from Huawei's Assembly and Architecture course (2023)
I am taking the course "Introduction to Computer Systems Architecture" (2024)
I am taking the course "Theory and Practice of Program Compilation" (2024)
